

KINGBULL HDPE Same-floor Wall Drainage System

Kingbull developed its advanced Same-floor wall drainage system; burying HDPE pipe inside the wall effectively reduced the noise generation and dissemination, making the whole drainage system quieter.

Kingbull specially developed PE100 grade HDPE drainage pipes and fittings with following characteristics:

1. High pressure and impact resistant, can be applied to high-rise building drainage;
2. High temperature resistant, can be applied to 65-degree water drainage works;
3. Scratch resistant, conform to construction site environment, safe and reliable;
4. Good flexibility, effectively reduce noise generation and dissemination;

Kingbull patented horizontal-type floor drain is specially designed for this system, its water seal exceeds 50mm, drainage discharge capacity reaches 1L / S or above; the "flip-open" design prevents evaporation of water seal, which keeps the bad odors at bay.

Complete fittings range, consistent material and process to ensure welding strength, therefore eliminates leakage, can be concealed or buried, fully meet a variety of drainage project requirements.

Good flexibility, effectively reduce noise generation and dissemination;

Complete fittings range, consistent material and process to ensure welding strength, therefore eliminates leakage, can be concealed or buried, fully meet a variety of drainage project requirements.

Optimal Solution For Building Drainage

Aesthetic and Free

Completely customized design, breaking all the traditional limitation of bathroom space.

Tranquil and peaceful

Innovative false-wall design, concealing the drainage system as well the noise.

Eliminating blind-spot

Wall-hung sanitary ware, eliminating cleaning blind-spot.
