

## Complete System Combination

Kingbull same-floor drainage solution offers complete pipe and fitting components, as well as professional and customized system services according to different architecture characteristics and building environments. Kingbull same-floor drainage solution is made up by professional HDPE Drainage pipes and fittings, concealed cistern and specially designed water-trap/floor drain.

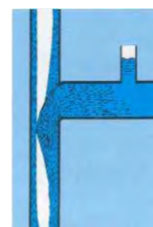

### Pipes and Fittings

Kingbull same-floor wall drainage system is made of HDPE (High Density Polyethylene), comparing with other systems, it has better impact resistance, corrosion resistance, high and low temperature resistance and aging resistance property.

### Sovent --- Gas and Water Separation

Sovent can be simultaneously connected up to 6 pipe-branch for flow diversion and confluence of a variety of flow media. The build-in flow-blocker can effectively guarantee smooth flow in certain direction, at same time reduced the flow speed of the drainage riser, therefore ensuring a balanced hydraulic pressure in the risers and branch pipe, thus eliminating the need of ventilation tube.

### Concealed Installation

Kingbull same-floor drainage solution conceals all kinds of pipes, cistern and installation frameworks in the wall, leaving only the wall-hung sanitary ware fixtures on the outside of the wall therefore unlimited imagination and space in modern bathroom designing.

### Water-trap/Floor Drain

Kingbull same-floor drainage solution provides professionally designed water-trap and drain products to different types of sanitary wares, which could prevent odors and the spread of bacteria, as well as achieve stable and smooth drainage, greatly optimize the building drainage system.
